Deposit Amount: 0.00  
Local Net Total: 206.00      Net Total: 206.00

Refer picture attached, this Invoice had selected the same item code, they also have same quantity and unit price but have different value of sub sales total. Why?

Item 1, have regular tax calculation. Refer the formula for tax NOT inclusive:

$$\text{Unitprice} \times \text{Tax}(6\%)$$

Item 2, RM100 is the net sales value, which is included tax. Refer the formula for TAX INCLUSIVE:

**Tax Inclusive** is a situation where customer is still required to pay tax, but business owners basically reduce the sales value to absorb the tax amount for the customer.

$$\text{Unitprice} \times \text{Tax}(6\%)$$

Let's have a look on Tax Invoice Format!

2	DIGI PREPAID-RM100	1.00 UNIT	100.00		94.34	94.34	5.66	100.00	SR

Why is item no.2 unit price show as RM100? *This is because if unit price show price after reduce, the customer could return in future to request tax inclusive again based on the lower price, then your sales price will lower and lower.*

***If you have many item which need the tax inclusive option, then you may tick directly under GST | Maintain Tax | Edit the 'SR' tax code | Ticked / Checked the tax inclusive option :***
